(54) Title: ARRANGEMENT FOR VENTILATION OF A VEHICLE SEAT

(57) Abstract: The invention relates to an arrangement for ventilation of a vehicle seat (1), which arrangement comprises an air-distributing material (5) and an electric heating element (6) comprising at least one electrically conductive component (7) arranged in a pattern in conjunction with at least one support (9), where the vehicle seat (1) comprises a bottom part (2) which is adapted for ventilation by blowing air in or sucking air out via at least one passage (15) through the bottom part (2) and on through the said air-distributing material (5). According to the invention, The said support (9), heating element (6) and air-distributing material (5) are manufactured as an integrated arrangement adapted for mounting in conjunction with the said vehicle seat (1), the said air-distributing material (5) being designed as at least one unit which is dimensioned for mounting in a correspondingly designed cutout (4) in the vehicle seat (1). By means of the invention, an improved arrangement for heating and ventilation of a seat in a vehicle is obtained.
